

Fourier Transform Theorems Contd....

Derivatives of the δ -Function

$$\int_{-\infty}^{\infty} \delta'(t) \phi(t) dt = - \int_{-\infty}^{\infty} \delta(t) \phi'(t) dt = -\phi'(0)$$

$$\delta'(t) = \frac{d\delta(t)}{dt}, \quad \phi'(0) = \left. \frac{d\phi(t)}{dt} \right|_{t=0}$$

$$\int_{-\infty}^{\infty} \delta^{(n)}(t) \phi(t) dt = (-1)^n \phi^{(n)}(0)$$

$$\delta^{(n)}(t) = \frac{d^n \delta(t)}{dt^n}, \quad \phi^{(n)}(0) = \left. \frac{d^n \phi(t)}{dt^n} \right|_{t=0}$$

Product Rule

$$[f(t)\delta(t)]' = f'(t)\delta(t) + f(t)\delta'(t)$$

Pf)

$$\begin{aligned} \int_{-\infty}^{\infty} \underbrace{[f(t)\delta(t)]'} \phi(t) dt &= - \int_{-\infty}^{\infty} [f(t)\delta(t)] \phi'(t) dt = - \int_{-\infty}^{\infty} \delta(t) [f(t)\phi'(t)] dt \\ &= - \int_{-\infty}^{\infty} \delta(t) \{ [f(t)\phi(t)]' - f'(t)\phi(t) \} dt \\ &= - \int_{-\infty}^{\infty} \delta(t) [f(t)\phi(t)]' dt + \int_{-\infty}^{\infty} \delta(t) [f'(t)\phi(t)] dt \\ &= \int_{-\infty}^{\infty} \delta'(t) [f(t)\phi(t)] dt + \int_{-\infty}^{\infty} \delta(t) [f'(t)\phi(t)] dt \\ &= \int_{-\infty}^{\infty} \underbrace{[\delta'(t)f(t) + \delta(t)f'(t)]} \phi(t) dt \end{aligned}$$

Product Rule

$$f(t)\delta'(t) = f(0)\delta'(t) - f'(0)\delta(t)$$

Pf)

$$\begin{aligned} f(t)\delta'(t) &= \underbrace{[f(t)\delta(t)]'} - \underbrace{f'(t)\delta(t)} \\ &= [f(0)\delta(t)]' = f'(0)\delta(t) \\ &= f(0)\delta'(t) \end{aligned}$$

Unit Step Function $u(t)$

- Define

$$\int_{-\infty}^{\infty} u(t)\phi(t)dt = \int_0^{\infty} \phi(t)dt$$

$$u(t) = \begin{cases} 1 & t > 0 \\ 0 & t < 0 \end{cases}$$

Derivative of the Unit Step Function

- Show that $u'(t) = \delta(t)$

$$\begin{aligned}\int_{-\infty}^{\infty} \underbrace{u'(t)} \phi(t) dt &= - \int_{-\infty}^{\infty} u(t) \phi'(t) dt \\ &= - \int_0^{\infty} \phi'(t) dt \\ &= -[\phi(\infty) - \phi(0)] = \phi(0) \\ &= \int_{-\infty}^{\infty} \underbrace{\delta(t)} \phi(t) dt\end{aligned}$$

Derivative of the Unit Step Function

Fourier Transform for $\delta(t)$

$$\delta(t) \xleftrightarrow{F} 1$$

$$\mathcal{F}[\delta(t)] = \int_{-\infty}^{\infty} \delta(t) e^{-j\omega t} dt = e^{-j\omega t} \Big|_{t=0} = 1$$

Fourier Transform for $\delta(t)$

Show that

$$\delta(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} e^{j\omega t} d\omega$$

$$\delta(t) = \mathcal{F}^{-1}[1] = \frac{1}{2\pi} \int_{-\infty}^{\infty} 1 e^{j\omega t} d\omega = \frac{1}{2\pi} \int_{-\infty}^{\infty} e^{j\omega t} d\omega$$

The integration $\frac{1}{2\pi} \int_{-\infty}^{\infty} e^{j\omega t} d\omega$ converges to $\delta(t)$

in the sense of generalized function.

Fourier Transform for $\delta(t)$

Show that $\delta(t) = \frac{1}{\pi} \int_0^{\infty} \cos \omega t d\omega$

$$\delta(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} e^{j\omega t} d\omega = \frac{1}{2\pi} \int_{-\infty}^{\infty} (\cos \omega t + j \sin \omega t) d\omega$$

$$= \frac{1}{2\pi} \int_{-\infty}^{\infty} \cos \omega t d\omega + \frac{j}{2\pi} \int_{-\infty}^{\infty} \sin \omega t d\omega$$

$$= \frac{1}{\pi} \int_0^{\infty} \cos \omega t d\omega$$

Converges to $\delta(t)$ in the sense of generalized function.

Two Identities for $\delta(t)$

$$\delta(y) = \frac{1}{2\pi} \int_{-\infty}^{\infty} e^{jxy} dx$$

$$\delta(y) = \frac{1}{\pi} \int_0^{\infty} \cos xy dx$$

These two ordinary integrations themselves are meaningless.

They converge to $\delta(t)$ in the sense of generalized function.
